MONTHLY WEATHER MAP

August 1961

LIBRARY
OCT 25 1961
WEATHER BUREAU

General Summary of Weather Conditions

August 1961 was hot and dry across most of the Canadian provinces. Important exceptions were southern Ontario and southern Quebec where rainfall was above normal. August temperature records were broken on the western Prairies, and it was a record dry August on the eastern Prairies and in eastern Newfoundland. The resulting crop failures and forest fires marked the summer of 1961 as one of the most arid summers on record in Canada.

During the first half of the month there was a strong west to east flow in the upper air circulation across the country. Vigorous low pressure systems moved eastward across a northern route to Baffin Island, while transient ridges and troughs progressed eastward across southern Canada. Toward the middle of the month the flow became more nearly north and south and a well developed ridge aloft became established over British Columbia and Alberta. At this time extremely high temperatures were reported from western Canada, while low temperatures prevailed in eastern Canada. Near the end of the month the westerly flow again developed across central Canada.

August was warm in the province of British Columbia, particularly in the southern sections. At Victoria the mean temperature for the month was the highest since 1942, while at Vancouver International Airport the August mean temperature was a new record high in 25 years of observation. On the 4th a number of stations achieved maximum temperatures of over a 100 degrees with the highest anywhere in the province being 104 at Crescent Valley. The greatest excesses of mean temperature were four to six degrees in the southern interior valleys of the province. In the central and northern interior mean temperatures were two to four degrees above normal while along the coast they ranged to three degrees above normal.

In the southern part of British Columbia the only periods with rain were a few days in the middle of the month and again at the end. Precipitation amounts were extremely variable, ranging from fifty per cent below normal to fifty per cent above normal in most of the southern part of the province. A few stations in the Kootenay district had excesses of fifty to one hundred per cent, while on the Fraser Delta precipitation was almost twice normal at most reporting stations. In the central interior of the province there were mainly precipitation deficiencies which ranged to eighty per cent, as they did also in the northern sections of the province.

August was again hot and dry on the Prairies. At most stations the hottest periods were on the 5th, around the middle of the month, particularly the 16th, and later on the 20th and the few days following. The highest temperature reported anywhere in Canada during the month was 110 degrees from Maple Creek, Sask., while Willow Creek with 109 was the runner-up. In the province of Alberta both Empress and Jenner reported August 1961 highs of 107 degrees, while the highest temperature experienced in Manitoba was 103 at Brandon. Mean temperatures for the month were six to eight degrees above normal in the grain areas of Saskatchewan, Alberta and eastern Manitoba, and three to five degrees above normal elsewhere on the Prairie Provinces. On the grain areas of Saskatchewan, it was the hottest August on record. Considering the months of June, July and August together, the summer of 1961 has been the hottest summer on record on the Prairies.

Precipitation was quite light on the Prairie provinces in August, in fact, it was one of the driest Augusts on record. Total amounts for the month ranged from zero to two tenths of an inch throughout central Saskatchewan, and were below a half an inch throughout the southern grain areas of the three Prairie provinces, with deficiencies ranging from eighty to one hundred per cent. In the Peace River district precipitation amounts were from a half to one inch with deficiencies of forty to sixty per cent. The month was practically free from damaging hail in all districts.

In southern Ontario August mean temperatures were quite close to normal. In the northwestern districts of the province the hot weather of the Prairies was reflected in excesses of mean temperature of two to four degrees. In the districts of Timiskaming and Cochrane on the other hand the mean temperatures were within one degree of normal.

Thunderstorms were more than usually prevalent throughout the month of August in all sections of the province of Ontario. Many of these caused locally heavy falls of rain. Perhaps the heaviest was one which occurred in the Timmins area on the 31st. This storm brought more than 5 inches of rain and caused the death of five people, drowned in sudden floods. In southern Ontario where approximately 6 thunderstorm days are normal for the month, many stations reported 9 or 10, while no less than 12 were recorded from Hamilton. Precipitation amounts were extremely variable ranging from slightly below normal at a few stations to over twice normal at scattered stations in the southwestern part of the province. Once again the northwestern districts of Kenora, Rainy River and Patricia reflected prairie conditions and here there were deficiencies ranging to eighty per cent but averaging forty per cent.

August mean temperatures were close to normal in all sections of the province of Quebec, the only exception was in a small area north of the St. Lawrence and embracing the valleys of the St. Maurice and Gatineau Rivers where there were temperature excesses of two to four degrees. Elsewhere in the province there were scattered stations with mean temperatures of two degrees above normal, but for the province as a whole the average was about one degree above normal.

August precipitation was swelled by a few heavy thunderstorms in the Montreal area, and in the Gatineau hills to the north. A total of 5.41 inches at Montreal Airport made it the wettest August in 19 years. At Mont Laurier a total of 12.14 inches was the highest monthly total reported anywhere in Canada for August 1961. Heavy falls were also noticed at Mitchinamekus Dam - 8.1 inches, and Kiamika - 7.6 inches. Precipitation totals ranged to twice the normal in the Eastern Townships and the upper part of the St. Lawrence River valley, and to two to three times normal at isolated stations in the Gatineau hills. On the Gaspe Peninsula and in the Lake St. John district precipitation excesses ranged from forty to eighty per cent. The central and northern interior of the province, on the other hand, experienced precipitation deficiencies of twenty to fifty per cent. Exceptions were Port Harrison with a seventy-five per cent excess, and Cape Hopes Advance with a ninety-five per cent deficiency.

Generally dry weather prevailed over the Atlantic provinces during August, making it the second consecutive warm, dry summer. Thunderstorms were more than usually frequent, but rainfall amounts remained low. The only general rains were reported on the 26th and 27th, when Halifax Airport reported a twenty-four fall of 2.23 inches. The dry weather helped to create a serious forest fire hazard, and numerous fires broke out in Nova Scotia, while one severe one burned in New Brunswick. The hazard was abated and the fires extinguished by the general rains late in the month. Mean temperatures averaged one to two degrees above normal throughout the Maritime provinces.

Dry sunny weather prevailed throughout the Island of Newfoundland during August. Twenty-four hour rainfalls of over an inch were reported on the 12th and 13th along the south and west coasts, with Daniels Harbour receiving 2.68 inches on the 12th. Inland, however, rainfall remained light until the latter part of the month. Totals for the month remained light throughout the Island, except for small excesses at Cape Race and St. Anthony, and a fifty per cent excess at Daniels Harbour. At all other stations on the Island of Newfoundland there were deficiencies which ranged from thirty to seventy per cent. Records at Gander and St. John's Airport showed this to have been the driest summer on record in those sections of the country. The dry weather contributed to a severe forest fire hazard and catastrophic forest fires burned out of control in the central and southeastern parts of the province destroying large tracts of rich timber land. Mean temperatures for the month were from one to two degrees below normal.

Along the Labrador coast, August 1961 was warm and dry. Monthly mean temperatures were one to two degrees above normal. Most stations reported precipitation deficiencies of ten or twenty per cent, but at Hopedale there was a ninety per cent deficiency.

In the Yukon Territory, August mean temperatures were seasonal, except at Mayo and Watson Lake where mean temperatures were two degrees above normal for the month. At Dawson the monthly precipitation total of over three inches was eighty per cent above normal. Mayo and Snag also reported precipitation excesses of ten or twenty per cent. In the southern part of the territory precipitation was below normal, deficiencies ranging from twenty to sixty per cent.

In the district of Mackenzie, mean temperatures for the month of August ranged to three degrees above normal. In the district of Keewatin mean temperatures were one to four degrees below normal. On the central part of the Arctic Archipelago there were also negative temperature anomalies of four degrees, but elsewhere in the Arctic temperatures were normal to two degrees below normal.

Precipitation was heavy along the Mackenzie River Valley, particularly at Norman Wells where 4.40 inches was sixty-five per cent above normal. Heavy falls were also reported from Bathurst Inlet and Contwoyto Lake. By contrast there were precipitation deficiencies ranging to forty per cent in the area around Great Slave Lake. Precipitation deficiencies were general on the Archipelago, ranging to ninety per cent, but Mould Bay and Holman Island experienced excesses of just over fifty per cent.

AUGUST 1961

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:
MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.
The remaining columns give the following information:
PRECIP. The total precipitation in inches for the month, including the rainfall and the equivalent of the snowfall.
SUN The total bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches, lying on the ground at the end of the month, (when reported).
The use of A following the station name indicates that the meteorological observations are taken at Airport offices.

British Columbia
